

CICH Database Overview as of 1.1.2026

Michael Büchler, CI-Zentrum Zürich

Yearly Report

- Approval

Audit of the CICHDB

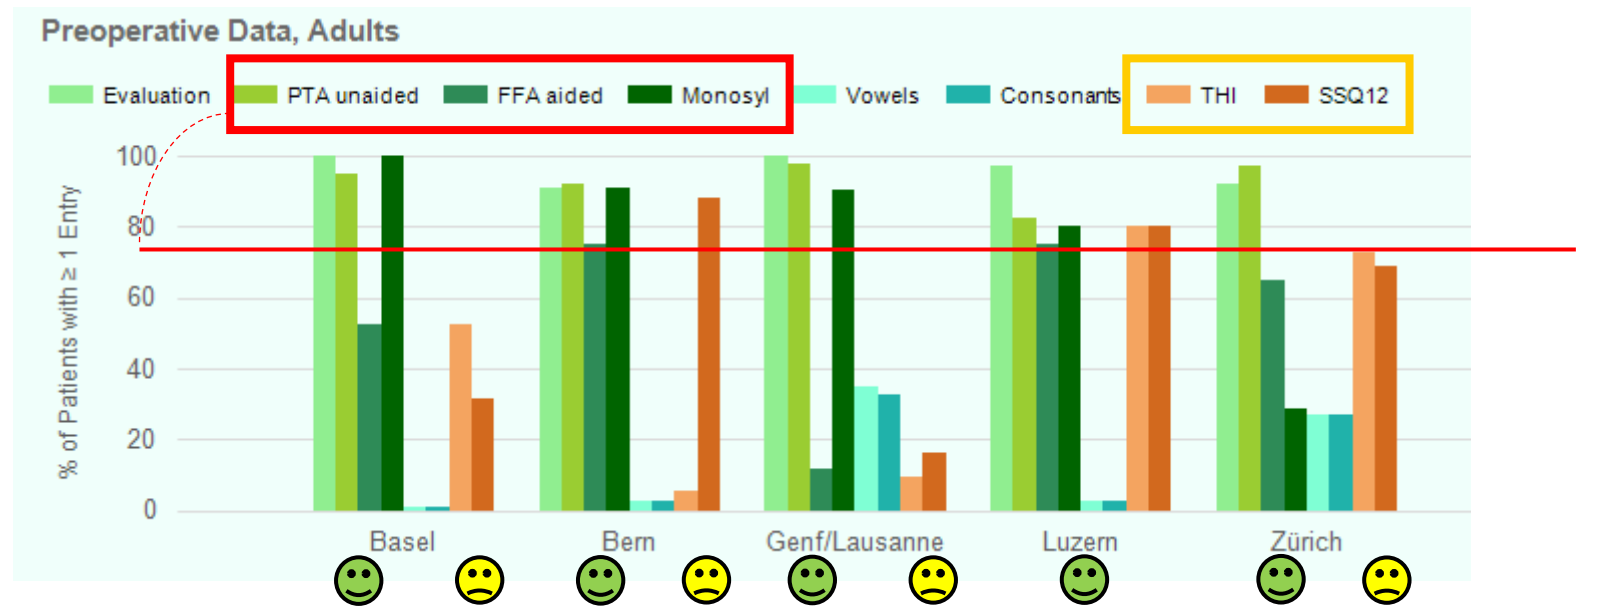

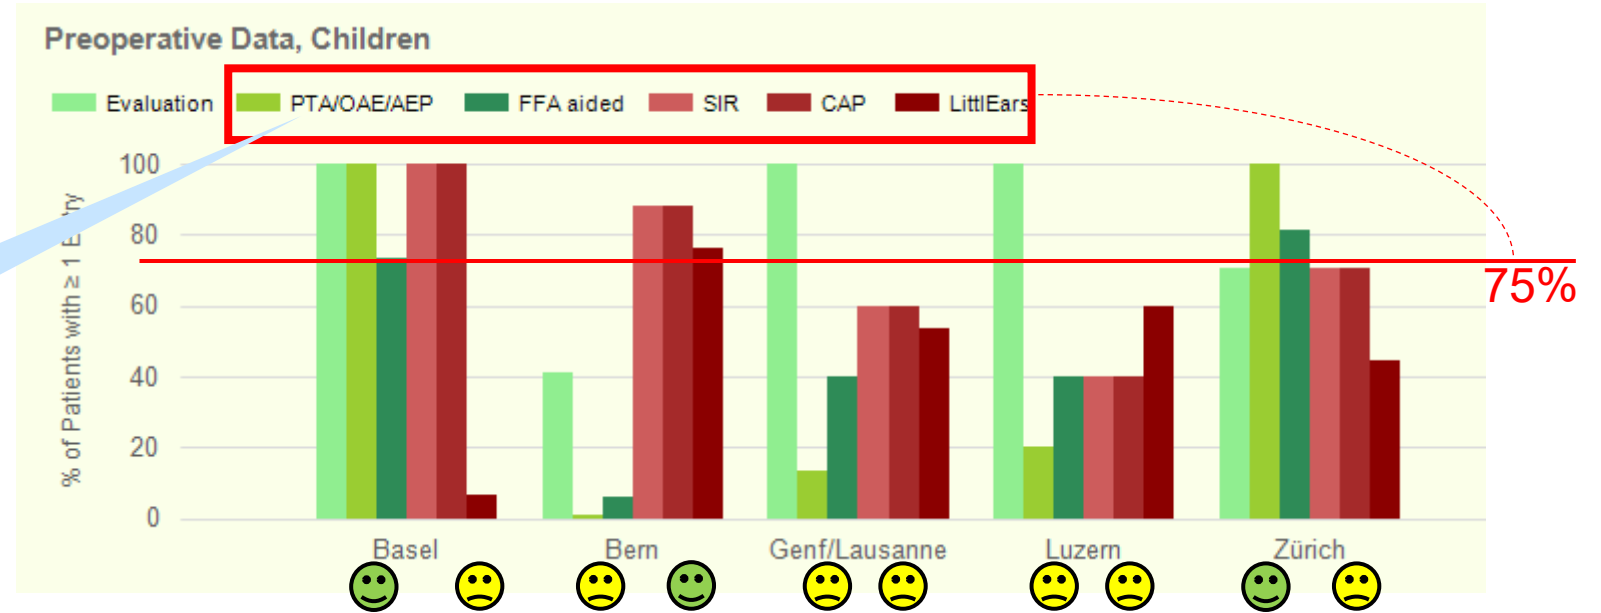

1. Logging of accesses via Webapp should be improved
2. Strength of PW should be increased
3. New users should sign a general data protection regulation
4. Incomplete preop data of children: Audiogram, CAP/SIR score, LittleEars questionnaire
 - › Centers should give a statement why data is missing and define actions for improvement
5. Quality of indication and outcome should be improved,
 - › e.g. number of non-users, subjective success and CI use time, development over the years
 - › look at specific groups -> Study

Quantitative Analysis

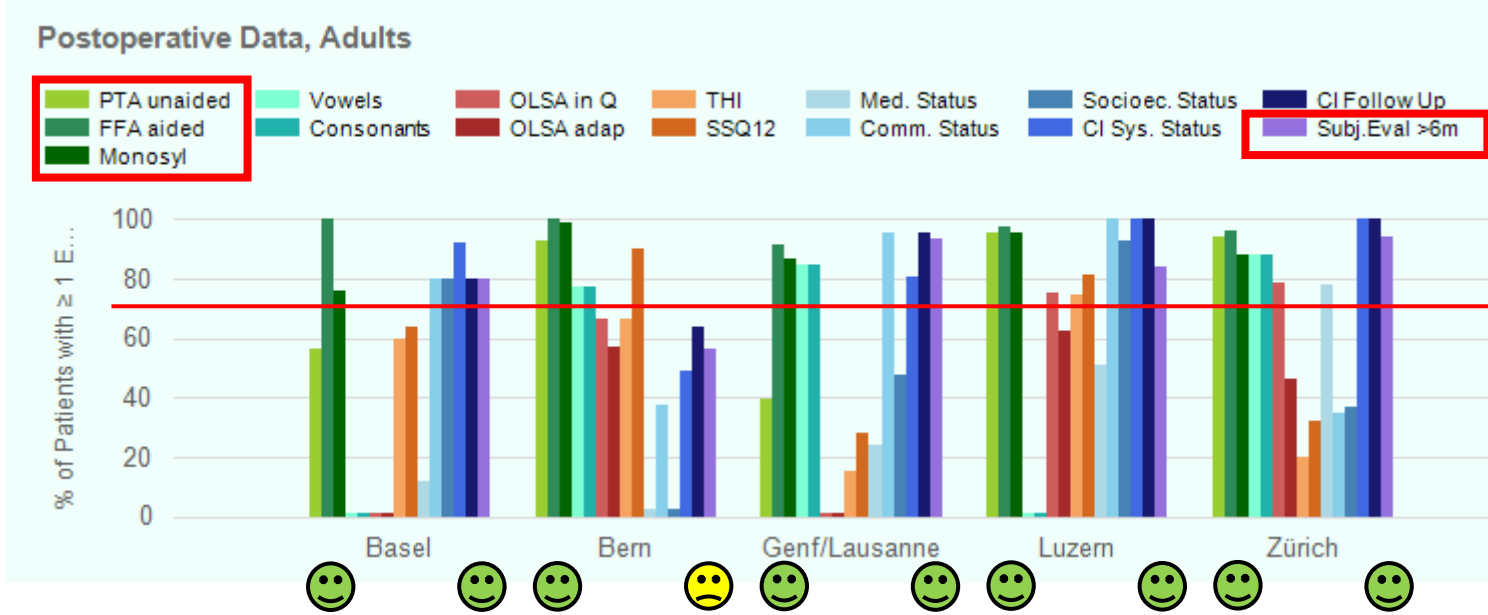

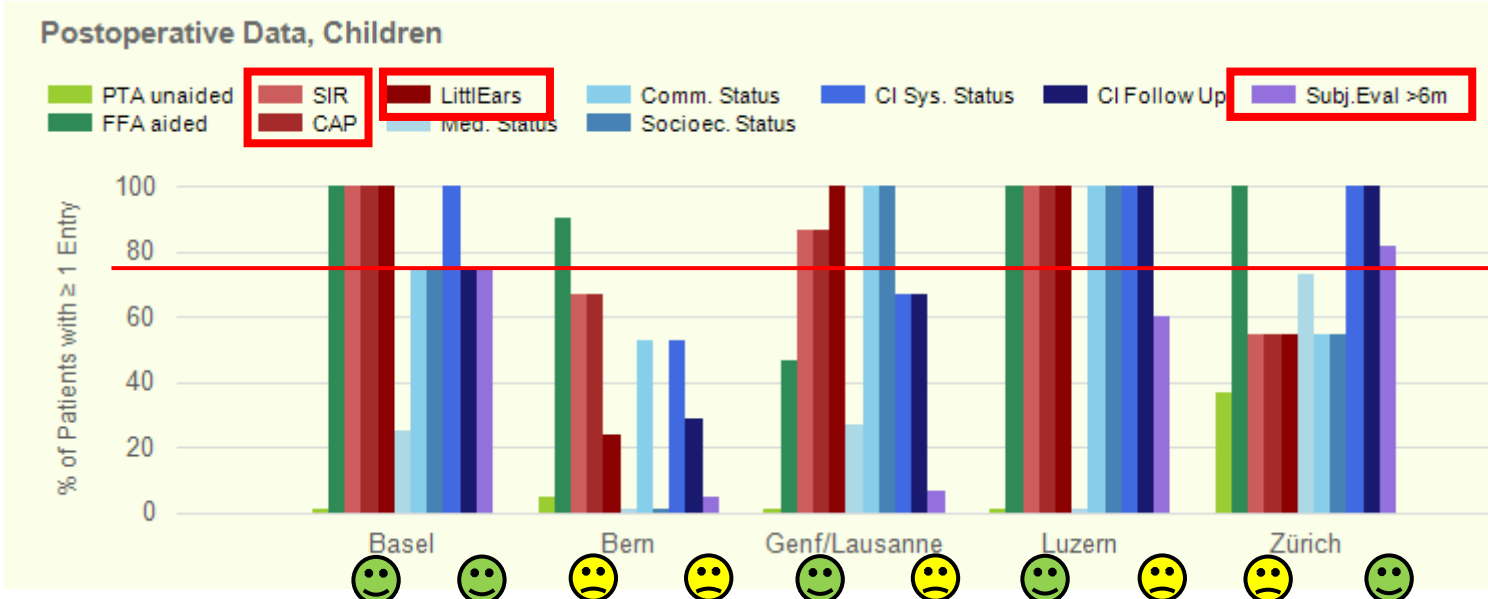

1. **Preop** Data for Implantations in **2025**
2. **Postop** Data for Implantations in **2024**
3. Graph shows the percentage of patients that have at least 1 entry in the respective category

Quantitative Analysis: Preop 2025

New: PTA or OAE or AEP

Quantitative Analysis: Postop 2024

Do not forget

1. Preop Data:

- a. SIR/CAP and LittleEars for *all* children
- b. Some kind of audiogram / OAE / AEP for all
- c. THI: For documentation: fill out also if *no tinnitus* present

2. Postop Data:

- a. SIR/CAP and LittleEars for *all* children
- b. Follow-Up after ~1 year with *subjective evaluation*
- c. Communication Status with *main language at home*
- d. Complications → Medical / CI System Status

3. Nice to have:

Consecutive Communication & Socio-economic Status

News

- Flag for General Consent now implemented. Innoforce will implement the automatic transfer of the GC status from ENTstatistics to CICHDB at your center, including import of status of existing patients.
- The web app and the interface service are outdated; any changes in the structure are complicated and need a lot of time. USZ IT will set up a project to bring the system up to the latest technical standards.
